

You're invited: Applying for Trillium funding to improve indoor air quality and reduce transmission of airborne illnesses

February 2024

What: Ontario Trillium Foundation (OTF) Capital Grant stream is now open, with **applications due March 6, 2024**. This grant can be used to make improvements to indoor air quality and help reduce transmission of airborne illnesses in your space. We are offering personalized, online sessions with granting expert [Anne Morais](#) and indoor air quality experts from University of Waterloo and University of Toronto.

When: Sign up for a 25-minute virtual appointment on **Tuesday February 13**.

How: To make an appointment, email Pearl Buhariwala at pearl.buhariwala@unityhealth.to. Appointments are limited, and will be booked on a first come, first served basis.

Who this is for: Community spaces in Ontario that are considering applying for the OTF Capital Grant stream to fund indoor air quality improvements.

You can ask about:

- Whether your organization and project are eligible under OTF's grant criteria, and which pre-selected project outcome best matches your project.
- The types of indoor air quality improvements that will make a real difference in your space and that would fit well with this grant.

Why we are doing this: Indoor air quality measures can help reduce transmission of COVID-19. They should be part of every facility's plan for infection prevention and control. For more about improving indoor air quality and our work, please see [here](#).

Please note: Any information shared about indoor air quality and related equipment or measures is for informational purposes only, and does not replace or remove the need for on-site advice from licensed professionals. We are not responsible for the way you or your organization apply the information shared during this session. Please also note that we are not engineers or medical professionals.
